QUANTUM LEAPS IN BOTH TECHNOLOGIES AND CAPACITIES EXPANSION

A New State-of-The-Art facility , adjacent to the existing Malacca factory was completed in Dec 2016 and will be fully operational in Mar-2017.

This expansion is part of MFS' strategy in continuous investment which enabled MFS to stay ahead of the competition. MFS has also invested in many new equipment which will further enhance MFS' process capabilities and leadership in High Density Interconnect products and allow it to meet customer demands for future product miniaturisation.

With the new SOTA factory, MFS expects to see a 30% increase in capacity.

The new floor plan layout also allows better production workflow which will result in higher production yield as well as ensuring best-in-class quality standard for products.

New SOTA

Malacca Factory

- Adjacent to existing Malacca factory
- State-of-The-Art facility
- Completed Dec 2016
- Fully operational Mar 2017
